

## TURNITIN SOFTWARE

Turnitin is a comprehensive plagiarism detection and academic integrity software widely used by educational institutions. Here are the main features and functions of Turnitin:

**Plagiarism Detection:** Turnitin scans submitted documents and compares them to a vast database of academic papers, articles, books, and web content to identify potential instances of plagiarism. It highlights text matches and provides a similarity report.

**Originality Reports:** Turnitin generates detailed originality reports that show the percentage of content that matches other sources. These reports help educators and students understand the extent of matched content and evaluate whether it constitutes plagiarism.

**Grading Tools:** Turnitin includes tools for grading and providing feedback on student assignments. Instructors can use features like rubrics, voice comments, and inline comments to assess student work.

**Peer Review:** The software supports peer review processes, enabling students to review and provide feedback on each other's work. This feature helps foster collaborative learning and critical thinking skills.

**Grammar and Spell Checking:** Turnitin integrates with grammar and spell-checking tools to help students improve the quality of their writing. It can identify grammar, punctuation, and spelling errors.

**Originality Score:** Turnitin assigns an originality score to each submission, which indicates the proportion of the text that matches other sources. This score helps educators quickly gauge the originality of a student's work.

**Integration with Learning Management Systems (LMS):** Turnitin can be integrated with popular LMS platforms like Moodle, Blackboard, and Canvas, making it easy for educators to manage submissions and access Turnitin's features within their existing systems.

**Educational Resources:** Turnitin provides resources and training materials for educators and students to promote academic integrity and teach best practices for citation and paraphrasing.

By offering these features, Turnitin helps maintain academic integrity, supports fair grading practices, and assists students in developing better writing skills.

To UTM students, the delivery of the Master Project Report (by taught course) must be accompanied by the Turnitin report. If the similarity percentage exceeds 20%, the Master Project Report will be rejected. Students will be asked to rewrite.

Complete information regarding Turnitin can be found from the following link.

## TURNITIN REPORT

**Master Project II** students are required to submit a **Turnitin** report when submitting the E-thesis at the end of the semester. If the Turnitin report is not submitted before the deadline, the student's marks will not be endorsed. Please take this matter seriously. The documents that needs to be uploaded is as follows:

- Checklist form with student's signature [ [Download](#) ]
- Submission of thesis's form [ [Download](#) ]
- Plagiarism agreement [ [Download](#) ]
- Turnitin report for every chapter
- Thesis in MS Word (1 chapter save as 1 files. Here, all the chapters must be the same with E-thesis)

You may download the workflow for turnitin process here [ [Download](#) ]

This is the quick turnitin manual for your reference [ [Download](#) ]
